DIAGNOSTIC RADIOLOGY

CHEST 2 VIEWS

10/03/01 1057

RA-01-129696

CHEST - TWO VIEWS

HISTORY: 79-year-old female with right-sided effusion and shortness of breath.

PA and lateral views of the chest are obtained and compared with studies of 09/12/01.

The right-sided pleural effusion has decreased in size since the previous examination. There is corresponding decrease in associated right mid and lower lung airspace disease.

The left lung remains essentially clear.

IMPRESSION:

Interval decrease in size of right-sided effusion.
